Differences between Document and Window Objects:

Document Objects:

- The document object represents a web page that is loaded in the browser.
- By accessing the document object, we can access the element in the HTML page.
- The document object can be accessed with a **window.document** or just **document**.
- It is loaded inside the window.
- It is the object of window property.
- Syntax: document.property_name;
- example: document.title : will return the title of the document

Window Object:

- The window object is the topmost object of the DOM hierarchy.
- It represents a browser window or frame that displays the contents of the webpage.
- Whenever a window appears on the screen to display the contents of the document, the window object is created.
- It is the very first object that is loaded in the browser.
- It is the object of the browser.
- Syntax: window.property_name;
- example: window.innerHeight : will return the height of the content area of the browser
